# PREMIUM WEST COAST TIMBER

Kicking Horse River Bridge, Golden, B.C. -- built as a Timber Framers Guild project.  
West Forest Timber Inc. supplied the curved timbers sawn from naturally curved logs  
so the grain follows the arch providing great strength.

RESIDENTIAL RESORT COMMERCIAL

RESIDENTIAL RESORT COMMERCIAL

**West Forest Timber Inc.** (WFT) delivers premium Douglas Fir, Red Cedar and Yellow Cedar timber, and other specialty lumber, at competitive prices.

Structural or Clear grades, FOHC or Boxed-Heart, green or kiln-dried, rough-sawn, textured or planed, our timbers are milled for highest accuracy and appearance.

Recycled and salvaged timber is also available and every piece has its own history of prior use.

**Alf Butterfield**  
CEO

Alfred Butterfield has worked with wood since joining a Connecticut construction crew at age thirteen. Moving to British Columbia in 1972, his appreciation of traditional east coast barns, houses and other heavy timber structures fed his admiration of big west coast trees. Having built timber-frames, he appreciates the skills involved and marvels at frames celebrating exceptional levels of design and workmanship.

As CEO of a specialty sawmill, Alf was involved in all aspects of timber manufacture from tree selection in the woods to “cutting from the heart,” the Asian method of sawing temple timbers for highest appearance and stability.

Pam Butterfield works closely with customers to assure accurate specifications, timely quotes, expedited manufacturing and on-time delivery. Her experience as an interior designer informs her ability to help customers with choices relating to species, finish and placement.

The Butterfields are long-standing members of the Timber Framers Guild (TFG) and Alf has served two terms as a director of the Timber Frame Business Council (TFBC)

Pam and Alf feel fortunate to live among the great trees of British Columbia and work in the timber frame industry – a commendable fraternity of people with shared values of craftsmanship and family.

Sales Manager

kiln-drying, re-sawing, surfacing, packaging, trucking and border crossings.

We understand the critical importance of timely delivery. Your timbers, manufactured to meet your particular requirements, will arrive on schedule.

## Kiln-dried Timbers

We send timbers to Fraserwood Industries to be dried in the world's only forty foot long Radio Frequency/ Vacuum (RF/V) kiln. Quality fiber and experienced milling are critical in producing timbers that will go through the KD process with minimal distortion.

Send us a list of what you need, and we'll return a quote that includes delivery to your site. We arrange all matters relating to the sawmill, kiln drying, S4S planing, packaging, trucking, border crossing, etc. Your timbers arrive when and where you need them.

Please call or email us with any question.

West Forest Timber is committed to excellent service for all builders throughout North America and abroad.

We have over forty years of experience with timber-frame construction, sawmilling and all facets of wood supply. We are here to help with any size project and welcome your questions and unusual requests.

We make sure the specifications for your order (number and frequency of knots, rings-per-inch, slope of grain, etc.) match your intended use. We arrange, and fully document, all matters relating to milling,
